

Owners Manual

Assembly and Maintenance Instructions For models JNR, WNK and TJK Series

THIS GAS APPLIANCE IS DESIGNED FOR OUTDOOR USE ONLY.

⚠ FOR YOUR SAFETY

If you smell gas:

1. Shut off gas to appliance.
2. Extinguish any open flame.
3. Open Lid.
4. If odor continues, immediately call your gas supplier or your fire department.

⚠ FOR YOUR SAFETY

1. Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
2. An LP cylinder not connected for use shall not be stored in the vicinity of this or any other appliance.

⚠ FOR YOUR SAFETY

Follow all leak-test procedures carefully in this manual before using. Do this even if the grill was dealer assembled. Do not try to light this appliance without reading the "Lighting" instructions in this manual.

YOU MUST READ THIS OWNERS
MANUAL BEFORE OPERATING
YOUR GAS GRILL.

THESE INSTRUCTIONS SHOULD BE LEFT WITH
THE CUSTOMER. KEEP THESES INSTRUCTIONS
FOR FUTURE REFERENCE.

Safety

DANGER

Failure to follow the Dangers, Warnings and Cautions contained in this Owner's Manual may result in serious bodily injury or death, or in a fire or an explosion causing damage to property.

WARNINGS

Do not store a spare or disconnected liquid propane cylinder under or near the barbecue.

Improper assembly may be dangerous. Please carefully follow the assembly instructions in this manual.

After a period of storage, and/or nonuse, the MHP Gas Barbecue Grill should be checked for gas leaks and burner obstructions before use. See instructions in this manual for correct procedures.

Do not operate the MHP Gas Barbecue Grill if there is a gas leak present.

Do not use a flame to check for gas leaks.

Combustible materials should never be within 24 inches of the top, bottom, back or sides of your MHP Gas Barbecue Grill.

Do not put a barbecue cover or anything flammable on, or in the storage area under the barbecue.

Children should never use your MHP Gas Barbecue Grill. Accessible parts of the barbecue may be very hot. Keep young children away while it is in use.

You should exercise reasonable care when operating your MHP Gas Barbecue Grill. It will be hot during cooking or cleaning and should never be left unattended, or moved while in operation.

Should the burners go out while in operation, turn all gas valves off. Open lid and wait five minutes before attempting to relight, using the lighting instructions.

Do not use charcoal or lava rock in your MHP Gas Barbecue Grill.

Never lean over open grill or place hands or fingers on the front edge of cooking box.

Do not enlarge the valve orifices or burner ports when cleaning the valves or burners.

The MHP Gas Barbecue Grill should be thoroughly cleaned on a regular basis.

Liquid propane gas is not natural gas. The conversion or attempted use of natural gas in a liquid propane unit or liquid propane gas in a natural gas unit is dangerous and will void your warranty.

Do not attempt to disconnect any gas fitting while your barbecue is in operation.

Use heat-resistant barbecue mitts or gloves when operating barbecue.

LIQUID PROPANE GAS UNITS ONLY

Use the regulator that is supplied with your MHP Gas Barbecue Grill.

Do not attempt to disconnect the gas regulator or any gas fitting while your barbecue is in operation.

A dented or rusty propane cylinder may be hazardous and should be checked by your local liquid propane supplier. Do not use a liquid propane cylinder with a damaged valve.

Although your liquid propane cylinder may appear to be empty, gas may still be present, and the propane cylinder should be transported and stored accordingly.

If you see, smell or hear the hiss of escaping gas from the liquid propane cylinder:

1. Move away from the liquid propane cylinder.
2. Do not attempt to correct the problem yourself.
3. Call your fire department.

MHP Grill upgrade options for added versatility, convenience and cooking enjoyment.

Reversible for total cooking versatility.

Exclusive, rust-free anodized aluminum cooking grids. This unique cooking system heats up faster, reduces flare ups and cooks all foods at a higher temperature, thereby searing in the delicious barbeque juices. Wide-ribbed side for grilling steaks, chops, burgers and ribs, branding them with sear lines. The flip side, with its smooth surface is ideal for grilling delicate foods such as fish, seafood and vegetables.

Stainless Steel Side Burner. The premium commercial grade stainless steel side burner is 11,000 BTU rated, has its own electronic ignition, and is factory assembled for simple drop-in installation.

Infra-Roast™ Rotisserie Burner System. Infra-red rear burner heats up fast to quickly put a seal around meats for juicier and more moist results. Constructed of commercial grade stainless steel and is easy to install or remove for normal grilling.

Warranty

**MODERN HOME
PRODUCTS**

LIMITED WARRANTY

Modern Home Products Corp. Offers to the original purchaser a Limited Warranty on all aluminum grill components except the 7 year "SearMagic" cooking system. These components will be free from defects in material and workmanship (excluding paint) when subject to normal domestic use and service. The highest quality paint is used where applicable, but due to various atmosphere conditions, chemicals, fertilizers, care, cleaning and actual use, no extended warranty can be made on paint. Also, for these reasons the limited warranty does not cover rust or aluminum oxidation, unless there is a loss of structural integrity on the grill components.

The Stainless Steel Burner is covered for a period of 7 years, Porcelain Briquettes 5 years, all other grill components for 1 year.

Warranty coverage begins on the original date of purchase, confirmed by return registration card and bill of sale. Proof of purchase is required to validate warranty.

Any component that proves defective within the warranty period will, if returned to the factory freight prepaid, be repaired or replaced free of charge. Warranties shall not apply, nor will M.H.P. assume responsibility for damages that might result from failure to follow M.H.P.'s instructions, local codes, or when the grill has been tampered with, or altered in any way. M.H.P. shall not be liable for any transportation charges, labor costs, or export duties.

Repair or replacement of a M.H.P. gas grill part does not extend the limited warranty beyond its original term from date of purchase, or begin a new limited warranty period.

This warranty does not include the cost of any inconvenience or property damage due to the failure of the product and does not cover damage due to misuse, abuse, accident, damage arising out of transportation of the product, or damage incurred through commercial use of the products. This express warranty is the sole warranty given by the manufacturer and is in lieu of all other warranties, expressed or implied, including implied warranty of merchantability or fitness for a particular purpose.

ALL WARRANTIES are null & void if grills are put into commercial or community use such as by hotels, condominium associations, apartment committees, etc.

Date Warranty Registration Was Mailed _____

MODERN HOME PRODUCTS CORP.
150 S. RAM ROAD
Antioch, IL 60002

MODEL IDENTIFICATION

Your MHP Gas Barbecue Grill is identified by a model number and a serial number located on the left side of the control panel. Always use both the model and serial numbers when contacting Modern Home Products about your grill. For future reference, take the time now to record the model and serial numbers below:

MODEL NUMBER: _____

SERIAL NUMBER: _____

DATE PURCHASED: _____

How to contact us: phone: 1-888-647-4745, fax: 1-800-637-2918, or E-mail: mhp@voyager.net,

or write: Customer Service
Modern Home Products
150 S. Ram Road
Antioch, IL 60002

To validate your warranty, you need to fill out and send in your warranty card within 10 days. You can either mail or Fax it to us. Or you can fill out the warranty card at our website: www.modernhomeproducts.com.

General Instructions

GENERAL INSTRUCTIONS

This installation guide provides you with easy to follow illustrations and instructions to assemble your MHP Gas Barbecue Grill.

Before you start assembling and using your MHP Gas Barbecue Grill we recommend that you read through all precautions, safe guards and instructions to avoid any personal injury or property damage.

Check Local Codes. Contact your local LP dealer or Natural Gas company for recommended installation procedures and regulations. If there are no local codes, installation must conform to the latest National Fuel Gas Code: ANSI Z 223.1. For Canada, installation must comply with local codes and/or Standard CAN/CGA-B-149-1 for natural gas installation and CAN/CGA-B-149-2 for propane installation.

For LP Gas Models the supplied Gaslow GS-801 Regulator must be used. Any replacement pressure regulator or hose assembly must meet or exceed the specifications of the Gaslow GS-801 Regulator.

For Natural Gas Models the grill is designed to operate at a pressure of 7" water column (W.C.) (1.75 kPa). Check your gas utility for local pressure. Pressures other than approximately 7" W.C. could affect the performance of your grill.

ASSEMBLY INSTRUCTIONS

There are 9 steps to assembling your MHP Gas Barbecue Grill: The mounting, LP tank mounting, control panel, gas supply connection, grill lid, lid handle, side shelves, and rock grate, cooking grid and warming rack.

The grill itself is partially assembled with the Burner, Venturis, Ignitor Collector Box and the Gaslow Regulator installed.

The JNR and WNK grills are specifically designed to fit the five mounting methods: Cart, In-Ground Post, Deck/Patio Base, Optimum Console and Built-in. The TJK Grill is supported by the Optimum Console mounting and Built-in.

You will need the following tools to assemble your grill:

- A Phillips head screwdriver
- A standard flat head screwdriver
- Two 7/16" wrenches or sockets

STORAGE

Turn gas OFF at the LP cylinder (or at the shut OFF valve in the case of Natural Gas) when the MHP Gas Barbecue Grill is not in use.

Do not store spare LP cylinders under the MHP Gas Barbecue Grill.

Store disconnected LP cylinders outdoors in a well-ventilated area, do not store in shed, building, garage or in any enclosed area.

OPERATING SAFEGUARDS

- ⚠ **Do not install your MHP Gas Barbecue Grill in or on recreational vehicles and/or boats.**
- ⚠ **Never use your MHP Gas Barbecue Grill near combustible surfaces, including roof overhangs, roofs, vinyl siding and window shutters. Maintain at least a 6-foot clearance.**
- ⚠ **Use this barbecue outdoors in a well-ventilated area.**
- ⚠ **Do not use your MHP Gas Barbecue Grill in a shed, garage, building, breezeway or any other confined area.**
- ⚠ **Do not use any kind of combustible material on or near the top, bottom, back or sides of the grill. Maintain at least a 2-foot clearance.**
- ⚠ **Leak test all gas supply line connections.**
- ⚠ **Do not let children operate a gas grill.**
- ⚠ **Keep the area around the grill clear of combustible vapors or liquids such as gasoline.**
- ⚠ **When operating the grill do not leave unattended. Keep children and pets away.**
- ⚠ **Keep fuel supply hose and electrical supply cord away from any heated surface.**

SAFETY

YOUR GRILL IS DESIGNED FOR OUTDOOR USE ONLY.

It should also not be used in an enclosed area such as a shed or garage because combustion uses available oxygen and discharges carbon monoxide.

The grill must be located no closer than 24" from any combustible surface behind or to the sides. Grill should not be located under overhead unprotected combustible surfaces.

Keep the area around the grill clear of combustible materials, flammable vapors or liquids such as gasoline.

Do not obstruct the flow of combustion and ventilation air.

Mountings

Cart Assembly Instructions (JCP, JCN, WCP & WCN)

Cart Mounting carton contains the following components:

Please check to be sure that all parts are included before proceeding. Contact your dealer if any parts are missing.

Parts	Quantity
Long Legs	2
Short Legs	2
Lower Shelf Frame	1
Stainless Grease Cup	1
Grease Cup Holder	1
8" Rubber Wheels	2
Axle Hitch Pins	2
Axle Washers	2
Hub Caps	2
Hose Retaining Ring	1
LP Tank Holder Ring Assembly	1 (Propane Models Only)

Hardware Kit

1/4-20 x 1 1/2" Rd. Hd. Sltd. Bolts	11
1/4-20 Kep Nuts	15
10-24 x 1/2" Rd. Hd. Sltd. Bolt	1
10-24 x 1/2" Hex Kep Nut	1
1/4-20 Thumb Sc	1 (Propane Cart Only)
1/4-20 x 3/4" Hex Head Bolt	1 (Propane Cart Only)
12' Natural Gas Hose	1 (Nat. Gas Cart Only)
Brass Quick-Disconnect	1 (Nat. Gas Cart Only)
Quick-Disconnect Dust Plug	1 (Nat. Gas Cart Only)
Dust Cap	1 (Nat. Gas Cart Only)

Complete view of Cart Assembly

Fig. 1

Step 1: Leg Assembly (Fig. 2)

1. Tip the grill head bottom on end as shown in Fig. 2. (TIP: work on protected area such as: carpet, tarp or one of the boxes to protect cart finish.)
2. Attach the two short legs to the left end of the grill head bottom with the "Hose Ring Hole" leg facing grill front. Use two 1/4-20 x 1 1/2" slotted bolts for each leg. Insert bolts from inside grill box, attach leg and fasten with 1/4-20 Kep nuts.
3. Attach the two long legs to the right end of the grill head bottom. Use two 1/4-20 x 1 1/2" slotted bolts for each leg. Insert bolts from inside grill box, attach leg and fasten with 1/4-20 Kep nuts.
4. Attached the hose clamp ring to the front left short leg with the 10 x 24 x 1/2" Rd. Hd. slotted bolt.

FINGER TIGHTEN ALL BOLTS UNTIL LOWER SHELF IS ATTACHED.

Fig. 2 1. Tip Grill On End

Step 2: Lower Shelf Assembly (Fig. 3)

1. Slip the lower shelf axle through the holes in the short legs.
2. Slide the wheels on the axle ends, then a washer on each, followed by a hitch pin clip through the axle hole. Tap plastic hub cap lightly to secure tight.
3. Align the other end of the lower shelf with the holes in the long legs. For the JNR model, slip the axle through the holes and fasten both ends with the threaded 1/4-20 x 3/4" slotted Rd. Hd. head bolt. For WNK model, use two 1/4-20 x 1 1/2" bolts and Kep nuts to fasten the lower shelf to the long legs (see Fig 3 inset).

STAND GRILL UPRIGHT TO SEAT LEGS AND TIGHTEN ALL BOLTS AND NUTS MAKING THE LEGS & FRAME RIGID. PERIODICALLY CHECK ALL FASTENERS FOR TIGHTNESS.

Mountings

Step 3: Tank Holder Ring Assembly For LP Gas Models (Fig. 4)

1. The L.P. Tank Holder Ring Connects to the lower shelf cross frame with the ring notches resting on the axle frame.
2. Align the rear tank ring-fitting hole over the lower cross frame hole. Insert a $\frac{1}{4}$ - 20 x $\frac{5}{8}$ " slotted bolt through the top and fasten with a $\frac{1}{4}$ - Kep nut from below.
3. Fasten the thumb screw ($\frac{1}{4}$ - 20 x $\frac{3}{4}$ ") to the tank ring fitting with the $\frac{1}{4}$ - 20 Hex nuts. The Hex nut slips into the captive slot on the tank ring fitting.
4. Use a $\frac{1}{4}$ - 20 x $1\frac{1}{2}$ " slotted bolt and a $\frac{1}{4}$ - 20 Kep nut to connect the tank holder flanges together.

For Natural Gas Models

(Note: Tank Holder Ring is not included with natural gas models.)

If the grill is to use natural gas from the supplied 12-foot hose: the hose must pass through the hose clamp (See Fig. 1). The hose will have a quick-disconnect fitting at the source and the source will have a gas shut off valve with easy access.

When you have completed the mount assembly go to the appropriate Grill Assembly Section and assemble the grill head.

Caution: Combustible material should never be within 24 inches of the top, bottom, back or sides of your MHP Gas Barbecue Grill.

Deck/Patio Mounting Assembly Instructions (MPB)

- *Either the JNR or WNK model grills may be mounted on the Deck/Patio base.*
- *The gas supply may be either LP or Natural.*
- *The grill head bottom should not be attached to the post until the mount is fasten to a deck/patio.*

Please check to be sure that all parts are included before proceeding. Contact your dealer if any parts are missing.

Parts	Quantity
2' Post	1
Patio Base	1
Post Access Door	1
Grease Cup Holder	1
28" Stainless Steel Tubing	1
Stainless Steel Grease Cup	1

Hardware Kit

$\frac{1}{4}$ - 20 x $\frac{3}{4}$ " Hex Head Bolts	7
$\frac{1}{4}$ - 20 Kep Nuts	7
$\frac{1}{4}$ " Flat Washers	7
8 - 32 x $\frac{1}{2}$ " Self Tapping Screw	1
Tube Clip	1

Continue on following page. →

Mountings

Step 1: Patio Base Mounting Assembly (Fig. 5)

1. Turn base on edge and insert the 2' post. Align the notches in the post with the notches in the base. **IMPORTANT:** Close tolerances may require you to tap the top of the post to seat it completely in the base socket which will then align the bolt slots.
2. Fasten post to base with four $\frac{1}{4}$ - 20 x $\frac{3}{4}$ " Hex bolts, washers and Kep nuts. Follow exact placement of washers as indicated. Tighten securely.
3. Attach the tube clip with the 8 - 32 self-tapping screw either on the right or left side of the base depending on the direction of your gas supply line.

Fig. 5

Step 2: Deck/Patio Mounting Installation (Fig. 6)

Position the patio base at the desired location on a deck or patio. **CAUTION: Be certain there are no combustible materials above, behind, left or right closer than 24" away.**

1. Mark the location of the four holes at the outside corners of the patio base and drill four holes. The base will be fastened down with lag bolts (not supplied by MHP) after you have connected the gas supply line. The top post notch is the front and the rear access door will be in the back of the grill.
2. Run the gas supply line into the post from the bottom to reach the access door and bend it 90° to exit the base at either notch. The patio base is notched on two sides to allow the gas line to exit either right or left.

3. Secure the gas line with the tube clip. (Option: On a raised deck if the gas supply line is to be run straight up into the post from below use the tube clip to attach the gas line to the deck for support.)
4. At the access door connect a $\frac{3}{8}$ " flare coupling (not supplied by MHP) to the gas supply line and Stainless Steel tubing. Position the tubing in the top notch of the post. Bend the tubing at the top end to match the Feed Line of the grill valve. **Do not kink the tubing.**

TUBE BENDING: For proper bending of the stainless steel tubing, see page 26 for bending instructions.

Step 3: Attaching The Grill Head Bottom To The Deck/Patio Post (Fig. 7 & Fig. 8)

1. To make the post-to-flange connection easier, remove the grill burner by taking out the small clip located under the bottom grill head. This will allow access to hold the Kep nuts inside the post.
2. Set the grill head bottom carefully in place, align holes and use the $\frac{1}{4}$ - 20 x $\frac{3}{4}$ " bolts and $\frac{1}{4}$ -20 Kep nuts to attach the grill flange to the post.

Mountings

3. Mount the grease cup holder to the rear flange hole with a 1/4 - 20 x 3/4" bolt and 1/4-20 Kep nut. The grease cup holder is supplied with the grill head.

When you complete the mount assembly go to the appropriate Grill Assembly Section and assemble the grill head.

In-Ground Mounting Assembly Instructions (MPP)

- Either the JNR or WNK model grills may be mounted on the In-Ground Mounting base.
- The gas supply may be either LP or Natural.
- To protect against corrosion, you must apply a suitable coating on the post to retard the effects of corrosion existing in local areas.
- The grill head should not be attached to the post until the post is permanently cemented in ground.

Please check to be sure that all parts are included before proceeding. Contact your dealer if any parts are missing.

Parts	Quantity
4' Post	1
Post access door	1
28" Stainless Steel Tubing	1
Stainless Steel Grease Cup	1
Stainless Grease Cup Holder	1
1/4 - 20 x 3/4" Hex Head Bolts	3
1/4 - 20 Kep Nuts	3

Step 1: In-Ground Mounting Installation (Fig. 9)

1. Dig a posthole about 8 inches wide by 2 feet deep. **Caution: Locate the hole so that the mounted grill head has a clearance of 24 inches away from any combustible object or surface; above, back, left or right.** Center the post in the hole and plumb it. Pour in

cement (gravel) up to the gas line access hole.

Keep in mind that the gas line access hole is on the back of the post and the notch at the top if facing front. Recheck plumb and allow cement to set.

2. Run the gas supply line into the post access hole (just above the cement). Make a 90° bend to reach the access door opening. The gas supply line should be trenched at least 18 inches below the surface of the ground to prevent damage from digging. **CAUTION: The gas supply line must be regulated (in the case of natural gas that means connected after your gas meter and regulator) and that you have an easily accessible shut-off valve.**
3. At the access door connect a 3/8" flare coupling (not supplied by MHP) to the gas supply line and Stainless Steel tubing. Position the tubing in the top notch of the post. Bend the tubing at the top end to match the Feed Line of the grill valve. **Do not kink the tubing.**

TUBE BENDING: For proper bending of the stainless steel tubing, see page 26 (Fig. 47) for bending instructions.

Step 2: Attaching The Grill Head Bottom To The In-Ground Post (Fig. 7 & 8)

To attach the grill head to the post please refer to Step 3 of the Deck/Patio installation procedures on page 8 and follow instructions.

When you complete the mount assembly Go to the appropriate Grill head section and assemble the Grill Head.

Mountings

Stainless Steel Optimum Console Assembly Instructions

- *The JNR, WNK or TJK model grills may be mounted on the Optimum Console.*
- *The gas supply may be either LP or Natural.*
- *The grill head should not be attached to the Optimum Console until the console is completely assembled*
- *The Optimum Console comes in two cartons—Box A contains the console and all associated hardware. Box B contains either the pedestal or cart base and all base hardware.*

Please check to be sure that all parts are included before proceeding. Contact your dealer if any parts are missing.

Parts

Quantity

BOX A

Stainless Steel Front Panel	1
Stainless Steel Console	1
Stainless Grease Cup	1
Tank Lock Bar	1

Hardware Kit

Nylon Lock Bar Spacers	2
¼ - 20x1¼" S.S. Hex Head Bolts	4
¼ - 20 S.S. KEP Nuts	12
¼ S. S. Washers	10
¼ - 20 x ¾" S.S. Hex Bolts	8
Rectangular Washers	4
2-piece Gasket	1

BOX B

Cast Aluminum Base	1
12' Nat. Gas Hose/Quick Discount	1 (Cart Nat. Gas Only)
Stainless Steel Flexible Tubing, 28"	1 (Pedestal Nat. Gas Only)
Axle	1 (Cart Only)
Axle Clips	2 (Cart Only)
6" Wheels	2 (Cart Only)
Hub Caps	2 (Cart Only)

Note: While assembling, peel the thin white protective film covering the stainless steel surfaces, especially in areas which will be partially hidden after assembled. **Do Not Scrape off.**

Step 1: Connect the Tank Locking Bar (Fig. 10)

1. From box "A" locate and attach the Tank Lock Bar across the back of the pedestal column. Use the ¾" S.S. Hex bolt, Nylon Lock Bar Spacer and a Kep nut on each side to fasten the Tank Lock Bar in place. This spreads and holds the correct spacing at the back of the column.

Fig. 10

Step 2: Attach the Base to the Pedestal (Fig. 11)

1. Before bolting the pedestal column to the base, the 2-piece gasket must be installed to create a barrier between the two metals. Remove the backing strips from the gasket to expose the adhesive and stick the gasket to the bottom lip of the pedestal column. **Make sure to align the holes.**
2. Attaching the pedestal column to the base will be easier to handle by laying the pedestal column face down and matching the holes on the pedestal column lip to the holes on the base. Use six ¾" bolts, four large rectangular washers, and on the underside six round washers and KEP nuts.

IMPORTANT: the large rectangular washers are used at the sides on top of the pedestal column lip. The round washers and KEP nuts are used under the base. Tighten securely and stand unit upright.

Fig. 11

Mountings

OPTION: For OPTIMUM Cart Only: (Fig. 12)

1. Attach the wheels by slipping the axle through the base, slide the wheels on and secure with the axle clips. Finish by snapping the hub caps on before standing unit upright.

Step 3: Connect the Grill Head Bottom (Fig. 13)

1. Attach the grill head bottom to the pedestal column top with four 1/4 - 20 x 1 1/2" Hex bolts, washers under the bolt head and Kep nuts. Peel the remaining protective coating off the pedestal column.

Step 4: Attaching the Access Panel (Fig. 14)

Note: Do not attach the front access panel until the control panel has been attached to the grill head bottom and the gas supply line has been properly connected and leak tested.

1. The front access panel attaches directly under the control panel and hides the access opening. Lift the access panel up behind the lip of the control panel, then slip the bottom double edge of the access panel (upward pressure may be needed) over the edge of the access opening.

When you complete the mount assembly go to the appropriate Grill Assembly Section and assemble the grill head.

Caution: Combustible material should never be within 24 inches of the top, bottom, back or sides of your MHP Gas Barbecue Grill.

Mountings

Built-in Kit Mounting Assembly Instructions (NMS)

- The JNR, WNK or TJK model grills may be mounted as a built-in.
- For use with natural or hard-plumbed propane gas.
- Use of the Built-in kit for LPG poses a safety risk and voids any and all warranty.
- Enclosure must be constructed from non combustible materials.
- The Built-In kit and grill head connection will be assembled upside down.
- Refer to appropriate section for grill head assembly.

Please check to be sure that all parts are included before proceeding. Contact your dealer if any parts are missing.

Parts

Set of doors with magnetic catches
Consisting of:

Parts	Quantity
Frame for Door Set	1
Left Hand Door	1
Right Hand Door	1
Heat Shield	1
Magnetic Catches	2
Door Handles	2
Front Face Plate for NMS (26" W x 11" H x 1½" D)	1
Right Side "L" Bracket 19" x 11"	1
Left Side "L" Bracket 19" x 11"	1
Rear Support Bracket 26 1/8" long	1
Grease Tray	1

Hardware Kit

¼ - 20 x ¾" Hex Its	12
¼ - 20 x 1 ¼" Hex Bolts	4
¼" Nuts	4
¼" Flat Washers	4
¼" Lock Washers	16

Important Notes:

Your structure should have a 3" to 4" concrete base on a sand footing.

The panel doors must have a 4" to 6" minimum elevation from the ground.

If your structure includes a back splash, allow 11" to the back edge of grill opening to allow the lid to open completely.

Combustible material should never be within 24 inches of the top, bottom, back or sides of your Grill.

Complete View Of Built-In

Step 1: Required Dimensions For Built-In (Fig. 16)

1. The grill head fits into an opening of 27½" wide by 10¾" high by 18" deep.
2. The Panel doors fit into an opening of 27¼" wide by 16¾" tall.
3. The side burner fits a surface opening of 10¼" wide by 11¾" front to back. It should be at least 5" away from the grill opening.

(The front face flanges on the mounting and the panel doors overlap the required opening surfaces by 15/8" and provide a clean look.)

Step 2: Built-In Mounting Assembly

IMPORTANT: Since the mounting is attached directly to the grill, you must first partially assemble your grill by attaching the control panel to the grill head (refer to the appropriate grill section for assembly instructions).

Then the built-in mounting heat shield must be attached to the bottom of the grill head using four ¼-20 x ¾" bolts, see *fig. 14* "Complete View" illustration.

Do not forget to remove the protective film from all stainless steel parts of your built-in mount.

To assemble the built-in frame (*Fig. 17*)

1. Align the holes of the right hand "L" bracket with the face panel (the face panel's 12 vent slots should be on the top) and insert two 1/4 x ¾" Hex bolts and fasten with flat washer, lock washer and nut, do not tighten at this time. When properly connected the grill support tabs on the "L" bracket should be facing up and inward.
2. Repeat procedure to connect the left hand "L" bracket.
3. Attach the rear bracket to both the right and left "L" brackets using two ¼ - 20 x ¾" Hex bolts at each end. Secure bolts with a flat washer, lock washer and nut.
4. Attach the frame to the bottom grill head by aligning the frame support tabs with the grill head bottom holes. Insert the ¼ - 20 x 1 ¼" Hex bolt from inside the grill head and screw it into the threaded frame support tab.

Fig. 17

To connect the full assembly to the enclosure.

5. Slide the grill head into the opening ¾ of the way in. Connect the gas supply using an approved outdoor connector. **Check for gas leaks.** (See Gas Leaks page 23.)

Note: Be certain that the gas pressure is between 6.5" and 7.5" water column. Excess gas pressure can cause warping and damage to grill head.

6. When finished connecting gas supply, slide grill all the way into opening so that the "L" bracket face flanges fit snugly to your enclosure face. Drill a hole in the masonry to match up with the "L" bracket face flange holes and fasten with lag bolts (not supplied).

Do not build a shelf below the bottom of the grill. The grill requires an open area for proper ventilation and service access.

7. Install the pre-assembled door kit by securing with a suitable fastening method. (Anchors and/or screws not included.)

When you complete the mount assembly go to the appropriate Grill Assembly Section and finish assembling the grill head.

JNR & WNK Assembly Instructions

CARTON CONTENTS

Please check to be sure that all parts are included before proceeding with assembly. Contact your local dealer if any parts are missing.

Note: The grill is partially assembled. The Burner, Spider Guards, Venturis, Ignitor Collector Box are installed. Also, for LP units the Gaslow Regulator and Hose are installed.

JNR & WNK Assembly Instructions

Grill Head Assembly Instructions

- The grill head bottom must be attached to the mounting before starting.
- It is easiest to work with the grill in the up-right position.
- The difference between the JNR and the WNK is the WNK is larger, has two side shelves and the warming rack fastens differently.
- Leak test all gas connections before using.
- **Caution:** Combustible material should never be within 24 inches of the top, bottom, back or sides of your MHP Gas Barbecue Grill.

View of JNR & WNK Grill Head Components

Step 1: Control Panel & Heat Shield

A. Attaching Heat Shield and Control Panel (Fig. 19)

1. Insert the $\frac{1}{4}$ - 20 x $\frac{3}{4}$ " Hex bolts through the two holes in the front of control panel.
2. Press a keeper washer to hold the bolts in place.
3. Slip the control panel shield onto the bolts.
4. Attach the complete control panel assembly to the front of the grill head with a $\frac{1}{4}$ - 20 Kev nut.
5. Make sure the valve orifices on the control panel aligns with the burner venturi correctly and that the venturi tubes go over the valve orifices at least $\frac{1}{4}$ " to $\frac{1}{2}$ " (see fig. 22 on page 16).

B. Connecting the Control Panel Support Brackets (Fig. 20)

1. Two support brackets are connected beneath the control panel to the grill head for added support. Push a $\frac{1}{4}$ - 20 x $1\frac{1}{4}$ " Phillips head bolt through the grill head from the inside.
2. Slip the support bracket in position, fasten with a $\frac{1}{4}$ - 20 Kev nut.
3. Attach the control panel to the support bracket by pushing up a $\frac{1}{4}$ - 20 x $\frac{1}{2}$ " Phillips head bolt through the support bracket and through the lower lip of the control panel, fasten with a $\frac{1}{4}$ - 20 Kev nut.

JNR & WNK Assembly Instructions

C. Ignitor Wire Connection (Fig. 21)

1. Tip the grill on its back (or upside down) and attach the control panel ignitor wire to the terminal sticking out from the bottom of the grill. **Be careful not to crack the delicate porcelain insulator.**

D. Orifice Engagement (Fig. 22)

At the top end of each valve there is a tiny gas opening known as the orifice. Gas exits the orifice and enters a venturi where it mixes with air coming in from the side air shutter. The proper mixture of air and gas produces a clean blue flame at the burner.

Make sure the valve orifice on the control panel aligns with the burner venturi tube correctly. The orifice should fit into the venturi tube $\frac{1}{4}$ " to $\frac{1}{2}$ " inches as shown below.

WARNING! Always check the alignment of the orifice and the venturi whenever the grill has been moved. Make sure that the orifice fits into the venturi tube $\frac{1}{4}$ " to $\frac{1}{2}$ ". Failure to make this connection may cause fire and result in serious body injury or damage to your grill.

Step 2: Connect the gas supply line (Fig. 23)

A. For LP-Gas Tank and LP Cart Models:

1. Pass the Gaslow Regulator Hose through the hose clamp ring and screw the ring to the front of the left leg.
2. Connect the regulator end of the hose to the LP-Gas Tank. **Tighten securely and leak test both connections. See Leak Testing on page 23.**

B. For Natural Gas Cart, Deck/Patio and In-Ground Mounts Using 12 foot Hose:

Connect one end of the supplied 12 foot hose to the grill valve connection behind the control panel. Then, connect the quick disconnect valve on the hose to the gas supply line connection. **Tighten securely and leak test both connections. See Leak Testing on page 23.**

C. For Deck/Patio & In-Ground Mounts Using 30" Flexible tubing. (Fig. 24)

Connect the 30" flexible tube to the incoming gas supply using a $\frac{3}{8}$ " flare coupling (not supplied). Attach the other end to the grill valve connection behind the control panel. To tighten securely use two wrenches. Hold valve joint with one wrench and tighten the hose fitting with second wrench. **After Tighten leak test both connections. See Leak Testing on page 23.**

Do not use compound or Teflon tape on flare fittings.

JNR & WNK Assembly Instructions

Step 2: Continued

D. Optimum Console Mount Gas Connections

All Optimum Console mounts:

The supply line connection pass beneath the heat shield and through the front slot with the protected edge and attaches to the valve. Don't forget to attach the front Access Panel to the Optimum Console. (Fig. 25)

Fig. 25

LP Propane for Optimum cart and pedestal mounts:

The hose connection from the Gaslow/Regulator passes out the front access opening; resting on the protected slot edge beneath the control panel. The LP tank locking bar will press against the tank as it is lowered into place to prevent tank movement. (Fig. 26)

Fig. 26

Natural gas for Optimum pedestal mount:

The gas line enters at the rear of the base curving up through the base opening. The stainless steel flexible tubing line must be connected to the incoming gas line using a 3/8" flare coupling (not supplied by MHP). The flexible tubing then passes beneath the heat shield and through the front access opening and attaches to the control valve. (Fig. 27)

See page 26 for tubing bending instructions.

Fig. 27

Tighten all gas connections securely and leak test both ends. See Leak Testing on page 23.

Natural gas hose for Optimum cart mount:

The natural gas cart uses a 12 foot hose with a quick disconnect (supplied). The hose passes beneath the heat shield through the front access opening and connects directly to the control valve. The quick disconnect end attaches to the gas supply line at the shut-off valve. (Fig. 28)

Fig. 28

Step 3: Attaching the Side Shelf (Fig. 29)

1. Turn NuStone Shelf upside down, noting the hole location of the (2) **Brass Treated Inserts**.
2. Lay Aluminum side shelf bracket onto shelf and mount NuStone Shelf with supplied 1/4-20 x 1 1/4" Phillips head bolt and Lock washers. **Do not over tighten.**
3. Attach the entire unit to the grill head by inserting two 1/4-20 x 1 1/2" Rd. Hd. Sltd screws. Insert bolt through the holes located on either the right or left side of the bottom grill head, fasten with a 1/4-20 Kep nut.

(Note: Repeat steps 1 and 3 to attach the WNK model second side shelf.)

Fig. 29

JNR & WNK Assembly Instructions

Step 4: Attaching the Grill Lid (Fig. 30)

1. Attach the grill lid to the grill head bottom using the two Hinge Pins and Hinge Clips.

Fig. 30

Step 5: Connect the Handle (Fig. 31)

1. Attach the handle to the grill lid using two $\frac{1}{4}$ - 20 x 1 $\frac{1}{2}$ " Hex bolts with Kep nuts. Graphite Gaskets are positioned between the end caps and grill lid as shown in fig. 31.

Use two $\frac{7}{16}$ " wrenches, one to hold the bolt head and one to tighten the nut.

Fig. 31

Step 6: Grates, Briquettes and Cooking Grids (Fig. 32)

1. Place the one piece Briquette Grate on the shelf edge just above the burner.
2. Carefully place the Ceramic Briquettes on the grate in the pattern shown. Use only one layer.
3. Place the two Cooking Grids above the Briquette Grate.

Before using your grill, leak test all gas line connections. And follow the lighting instructions. See page 23.

Fig. 32

Step 7: Warming Rack

1. The JNR Warming Rack rests in the notches on the top edge of the grill head bottom. (Fig. 33)

Fig. 33

2. The WNK swingaway Warming Rack connects to the grill lid and the grill head bottom. First, insert the right Top and Bottom Rods into their respective mounting holes on right side of the grill lid and grill head bottom. Then slide the RACK to your left, positioning the left Top and Bottom Rods into their respective mounting holes simultaneously. The Lower Right Rod End can then be "popped" into place by flexing it inward. (Fig. 34)

Fig. 34

3. The SearMagic Warming Rack drops onto the top edge of the grill head bottom. the warming rack bracket is positioned between the hinges of the grill head bottom inside back wall. (Fig. 35)

Fig. 35

TJK Assembly Instructions

CARTON CONTENTS

Please check to be sure that all parts are included before proceeding with assembly. Contact your local dealer if any parts are missing.

Note: The grill is partially assembled. The Burner, Spider Guards, Venturis, Ignitor Collector Box and the Stainless Steel Handle are installed. Also, for LP units the Gaslow Regulator and Hose are installed.

MODEL TJK Grill

<u>Parts</u>	<u>Quantity</u>
Top Lid Assembly	1

TJK Assembly Instructions

Grill Head Assembly Instructions

- *The grill head bottom must be attached to the mount before starting.*
- *It is easiest to work with the grill in the upright position.*
- *Leak test all gas connections before using.*
- *Caution: Combustible material should never be within 24 inches of the top, bottom, back or sides of your MHP Gas Barbecue Grill.*

Complete View of TJK Grill

IMPORTANT: Most of the TJK Model major component assembly is the same as the JNR/ WNK Models. Please refer to the JNR/ WNK assembly instructions as indicated.

Step 1: Control Panel & Heat Shield

(See JNR/ WNK instructions on page 15, Fig. 19 & 20)

Step 2: Connect The Gas Supply Line

(See JNR/ WNK instructions, item D on page 17, Figs. 25-28)

Step 3: Attaching the TJK Side Shelf (Fig. 37)

1. Fasten the Shelf Bracket to the Right side of grill head bottom with two $\frac{1}{4}$ -20 x $1\frac{1}{4}$ " Rd. Hd. Sltd bolts and $\frac{1}{4}$ -20 Kep nuts.
2. Attach the Shelf and the Condiment Holder to the Brackets. All four 10-24 x $1\frac{1}{4}$ " bolts should be inserted into the bracket before tightening them with 10-24 Kep nuts..
(Note: Repeat steps 1 and 2 to attach the other side shelf.)

Step 4: Attaching the Grill Lid

(See JNR/ WNK instructions on page 18, Fig. 30.)

Step 5: Grates, Briquettes and Cooking Grids

(See JNR/ WNK instructions on page 18, Fig. 32)

Step 6: Warming Rack (Fig. 38 & 39)

1. The Warming Rack connects to the grill lid and the grill head bottom. First, insert the right Top and Bottom Rods into their respective mounting holes on right side of the grill lid and grill head bottom. Then slide the RACK to your left, positioning the left Top and Bottom Rods into their respective mounting holes simultaneously. The Lower Right Rod End can then be "popped" into place by flexing it inward.

2. The SearMagic Warming Rack drops onto the top edge of the grill head bottom. The warming rack bracket is positioned between the hinges of the grill head bottom inside back wall.

Before using your grill, leak test all gas line connections. And follow the lighting instructions. See page 23.

Gas & LP Tank Connections

GAS & LP CYLINDER

Check Local Codes

Consult your local LP dealer or Natural Gas Company for recommended installation procedures and regulations. In the absence of local codes, installation must conform to the National Fuel Gas Code, ANSI Z223.1 or CAN/CGA-B149.1 Natural Gas Installation Code or CAN/CGA-B149.2, Propane Installation Code.

Natural Gas Models

The grill is designed to operate on Natural Gas at a pressure of 7" water column (W.C.) [1.75 kPa]. Check with your gas utility for local gas pressure. Use of your gas grill at pressures other than approximate 7" WC could affect the performance of your grill.

Natural Gas Hose & Inspection

A single hose of not more than 12 feet long (3.6 meters) is supplied with the cart-styled models.

- Check the hose before each use at places where there could be extra bending, such as near the gas supply quick-disconnect coupling and at the grill valve connection. Look for cracking, cuts or heat damage. Check the entire length for cracking and excessive wear.
- To replace the hose, turn off gas supply at valve. Release the quick-disconnect coupling. Using a wrench, disconnect hose from grill valve connection under the control panel, and clean threads.
- Replace only with an identical hose from the manufacturer or an authorized dealer. **Do not use pipe joint compound on the flared fitting at the control panel grill valve connection.**

LP Gas Models

The Grill using a **Type I** LP cylinder includes the Gaslow Regulator that incorporates an industry exclusive Leak Detector and Fuel Supply Indicator. Any replacement pressure regulator or hose assembly must meet or exceed the specifications of the Gaslow Regulator.

DO NOT CONNECT THE GRILL TO AN LP GAS CYLINDER GREATER THAN 20 LB. CAPACITY.

LP Gas Cylinder Requirements: (The LP-Gas Cylinder is not supplied with your MHP Grill.)

- The LP cylinder should be equipped with an OPD (Overflow Prevention Device) and a QCC! Or Type 1 (CGA810) cylinder connection. This cylinder connection is compatible with the grill connection. OPD is an internal mechanical device that limits the amount of liquid propane and prevents overfilling the LP cylinder. The correct filling methods for the filling of your cylinder are by weight or volume, as described in NFPA 58. Please make sure your LP dealer fills your LP cylinder by weight or volume. Ask your LP dealer to read purging and filling instructions on the LP cylinder before attempting to fill.
- All LP cylinders supply systems must include a collar to protect the cylinder valve.
- The LP cylinder must be a 20-LB size (18 1/4 " high, 12 1/4" in diameter).
- The LP cylinder must be constructed and marked in accordance with the specifications for LP-gas cylinders of the U.S. Department of Transportation (D.O.T.). In Canada, gas cylinders must meet Canadian LP Gas Tank Specification Code, National Standard of Canada, CAN/CSA-B339, Spheres and Tubes for the Transportation of Dangerous Goods and Commission.
- Be sure your LP cylinder has a D.O.T. certification and has been tested within five years. This information is usually marked on the protective collar.

WARNING: If you use an LP tank exchange service, be sure that the exchanged tank is equipped with an OPD. If there is not an LP tank available for exchange equipped with an OPD, we recommend that you have your LP tank filled by an authorized LP dealer.

DANGER

Do not use an open flame to check for gas leaks. Be sure there are no sparks or open flames in the immediate area while you check for leaks. Sparks or flames will result in a fire or explosion which can cause serious bodily injury or death, and damage to property.

Gas & LP Tank Connections

CONNECTING THE LP CYLINDER (Fig. 40)

1. Slip the LP cylinder into the grill LP Tank Mounting. Position the LP cylinder so that the tank valve receives the regulator without kinking or creating sharp bends in the hose. Secure the tank to the grill base. For cart base models fasten the mounting thumbscrew to secure the tank in place. The Optimum Console base models has the LP Tank Locking Bar to hold the LP Cylinder in place (**refer to mounting section for detail**).
2. The Gaslow Regulator has a large plastic nut - QCC-1 fitting - for hand tightening (no tools required) and a RIGHT HAND THREAD (turn clockwise). Connect the regulator to the cylinder by inserting the regulator nipple into the tank valve. Tighten the large plastic nut **CLOCKWISE** by hand until secure.

REMOVAL OF THE LP CYLINDER (Fig. 38)

1. Close the LP tank valve.
2. Unscrew the QCC-1 plastic nut **BY HAND COUNTERCLOCKWISE** (to the left).
3. Loosen the LP cylinder from the Tank Mounting
4. Lift cylinder off.

WARNING: If you exchange your LP cylinder, make sure you get a similar tank in return.

WARNING: Your exchanged LP cylinder must be equipped with a QCC-1 or type-1 valve and an OPD (Overflowing Prevention Device). Other LP cylinders may not be compatible with your grill connection.

LP-GAS CYLINDER FILLING & HANDLING

A qualified attendant, who fills the cylinder by weight, should fill your LP cylinder at an authorized LP gas dealer. Improper filling is dangerous.

- When transporting the LP cylinder be sure the plastic dust cover is in place over the valve. This keeps the valve threads free of dirt.
- Do not handle the cylinder roughly.
- Do not apply heat directly to the cylinder.

LP-GAS CYLINDER FILLING & HANDLING (Continued)

- Air must be removed from a new LP cylinder before the initial filling. Your LP dealer is equipped to do this.
- The cylinder supply system must be arranged for vapor withdrawal
- Always keep and store cylinders in an upright, secure position.
- Use this grill outdoors in a well-ventilated area. Do not use in a garage, building, or any other enclosed area.
- Storage of an outdoor cooking gas appliance indoors is permissible only the cylinder is disconnected and removed from the outdoor cooking gas appliance.
- If the outdoor cooking appliance is not in use, the gas must be turned off at the supply cylinder.
- Cylinders must be stored outdoors out of reach of children and must not be stored in a building, garage or any other enclosed area.

LP GAS CYLINDERS SAFE HANDLING TIPS

- Liquid propane (LP) gas is a petroleum product as are gasoline and natural gas. LP gas is a gas at regular temperatures and pressures. Under moderate pressure, inside a cylinder, LP gas is a liquid. As the pressure is released, the liquid readily vaporizes and becomes gas.
- LP gas has an odor similar to natural gas. Be aware of this odor.
- LP gas is heavier than air. Leaking gas collects in low areas and prevents dispersion.
- To fill, take the LP cylinder to your local authorized LP dealer, or look up "gas-propane" in the yellow pages to find authorized dealers.
- A new LP cylinder must be purged before the first filling. Your LP dealer is equipped to do this.
- An LP cylinder must be transported, installed and stored in an upright position.
- LP cylinders should not be handled roughly.
- Never store or transport an LP cylinder where the temperatures can reach 125 degrees. Never leave an LP cylinder in a car on a hot day.
- Always close the LP cylinder valve before disconnecting the tank or any other gas fitting.
- Always close the LP Cylinder valve after using grill.
- Do not use a damaged LP cylinder. Dented, rusty or a damaged LP cylinder valve may be hazardous and should be replaced with a new one immediately.

• Never fill the LP cylinder beyond 80% full.
• Do not store a spare LP gas cylinder under or near the grill.
If this information is not followed exactly, a fire causing death or serious injury may occur.

Leak Testing & Lighting Grill

Leak Testing

- ⚠ **LEAK TEST ALL GAS CONNECTIONS BEFORE USING YOUR GRILL.**
- ⚠ **DO NOT SMOKE WHILE LEAK TESTING.**
- ⚠ **DO NOT LEAK TEST WITH A MATCH OR OPEN FLAME.**
- ⚠ **DO NOT USE A GRILL THAT IS LEAKING GAS.**
- ⚠ **YOU SHOULD TEST FOR GAS LEAKS EVERY TIME YOU DISCONNECT AND RECONNECT A GAS FITTING.**
- ⚠ **PERFORM A LEAK TEST EVEN IF YOUR GRILL WAS DEALER OR STORE ASSEMBLED.**
- ⚠ **DO NOT IGNITE BURNERS WHEN LEAK TESTING.**

LEAK TESTING

1. For LP models, leak test with a full propane cylinder.
2. For systems other than self-contained LP cylinders:
 - A. The grill and its individual shut-off valve must be disconnected from the gas supply piping systems during any pressure testing of that system at test pressures in excess of 1/2 psi (3.5 kPa).
 - B. The grill must be isolated from the gas supply piping system by closing its own manual shut off valve during any pressure testing of the gas supply piping system at pressures equal to or less than 1/2 psig (3.5 kPa).
1. Grill burner control valves should be turned off and the gas turned on at source.
2. Apply soap solution to all gas connections.
To make soap solution, mix together equal amounts of liquid detergent and water.
3. Soap bubbles will appear if there is a leak.
4. Tighten the connection to make proper seal. And recheck for soap bubbles.

If you cannot stop a gas leak by tightening, turn gas supply off. Take leaking joint apart, clean it, reconnect and test again. If leak persists, contact the dealer or gas utility.

A gas system MUST be tested yearly, or whenever the LP cylinder or any other gas system part is replaced.

Lighting Your Grill

- ⚠ **ALWAYS OPEN GRILL BEFORE LIGHTING THE BURNER.**
- ⚠ **DO NOT LEAN OVER AN OPEN GRILL. KEEP YOUR HEAD AND BODY AT LEAST ONE FOOT AWAY WHEN LIGHTING THE GRILL.**
- ⚠ **IF BURNER DOES NOT LIGHT, IMMEDIATELY TURN BURNER CONTROL KNOBS TO OFF. WAIT FIVE MINUTES TO LET GAS CLEAR BEFORE YOU TRY LIGHTING AGAIN.**

LIGHTING

1. Open Lid. Examine the interior to be sure it appears normal.
2. Turn burner control knobs to OFF position.
3. Turn gas ON at LP tank or supply. **Wait 5 seconds for regulator to set itself.**
4. Turn either burner control knob to HIGH and rotate the ignitor knob CLOCKWISE several times. One half of the burner should light. Turn the other burner control knob to HIGH and the other half of the burner will light automatically.
5. Check that the burner is lit by looking through the match light hole on the lower right hand side. The burner flame should be a hard blue cone with a minimum amount of yellow flame, although some yellow dust flicks may occur.

6. Close the grill lid and pre-heat the grill for five to ten minutes before cooking.

WARNING: If burner fails to light, turn control knobs OFF and wait five minutes for gas to clear and try lighting procedure again.

To light burner manually, use a paper book match or other hand held ignitor. Insert match through lower right side match hole. Turn on the **RIGHT** burner control knob to the high setting. Light burner.

To Extinguish your grill: Turn each burner control knob to OFF position. Turn gas supply OFF at the source.

Maintenance

Annual Maintenance

After a period of nonuse or to keep your grill in top operating condition, you should perform the following maintenance procedures to keep the grill ready for instant use and for your safety.

- Do not obstruct the flow of combustion and ventilation air.
- Clean inside the grill head. Remove the burner/venturi assembly and cover the valve orifices with a piece of aluminum foil to keep out dirt. Brush inside bottom and sides with a stiff wire brush to remove built-up grease and debris. **Be careful not to damage the Ignitor or Collector Box.**
- Test the Ignitor for a good spark. (See Rotary Spark Ignitor System in the General Maintenance section.)
- The stainless steel burner may be brushed lightly with a stiff laundry brush. Any clogged flame holes may be opened using a thin wire. Use the supplied venturi cleaning brush or a bottle brush, pipe cleaner to clean out the venturis. (See Flashback in General Maintenance.)
- Clean the Control Panel, Side Shelf Supports, Lid Handle Spacers, Lower Cart Frame, Posts with a mild detergent soap and warm water solution. For the Optimum Console use a mild detergent soap and water, Windex or a quality stainless steel cleaner such as MHP's Stainless Steel Cleaner (Part #SSC) to clean the column and grill lid facing. **Do Not Use cleaning agents such as bleach, powdered cleansers, steel wool pads or caustic solutions like oven cleaners because they will damage the surfaces.**
- Porcelain cooking grids should be cleaned by first pre-heating the grill on high for ten minutes, lid closed. Then with a brass bristled grill brush clean off the debris. Do Not wash the porcelain grates in a sink or dishwasher. It may ultimately cause the porcelain to chip.
- Occasional white oxidation on the exterior of your grill head and lid may be washed off with mild soap and warm water.
- Severe weathering of the grill head and lid can be remedied by lightly sanding or rubbing with steel wool. Then it can be recoated with a high quality heat resistant paint similar to MHP's BF-1 Paint, available in spray cans from your dealer.
- Inspect the hose and gas fittings. Remember to leak check every time you disconnect and reconnect a gas fitting.
- Keep the ventilation openings of the LP cylinder enclosure free and clear from debris.

Warning: Check the hose before each use of the grill for nicks, cracking, abrasions or cuts. If the hose is found to be damaged in any way, do not use the grill. Replace using only MHP authorized replacement hose.

General Maintenance

Flashback

In some areas of the country, spiders and other insects build nests, lay eggs and spin webs in the grill's venturi tube or valve orifice. This obstructs the full flow of gas to the burner. Some gas backs up resulting in a "**Flashback**" - a fire in the venturi behind the control panel which could cause serious bodily injury or damage to your grill.

To remove spider webs and/or other obstructions, you must clean out the venturis. **This should be done routinely if the grill has sat idle for extended periods. Also, if you live in an area where spiders are plentiful, you should clean the venturis often, especially in the fall when there is an increase in egg sack production.**

To clean, be sure the grill is cold. Open lid and remove the cooking grids, the briquettes and the briquette grate.

1. Remove the burner clip holding the burner in place. (See Fig. 42)
2. Lift burner and venturi assembly out. With supplied cleaning brush, a pipe cleaner or a flexible wire, clean out the venturi tube.
3. Remove hex head orifice with a 3/8" wrench. Clean Orifice hole and inner part of the valve with a toothpick. Be careful not to enlarge the orifice hole.
4. Check orifice receptacle in valve body.

When finished cleaning reassemble the complete unit.

General Maintenance

Rotary Spark Ignitor System

If you experience an occasional “No-spark-No light” condition here’s a check list to troubleshoot the problem.

1. Inspection. WITH GAS OFF, position a mirror in front of the collector box and rotate the ignitor knob several times. Observe the condition of the spark. (Low light conditions are the best for seeing the spark.)

A. If there's a good spark, but the grill won't light, gas may not be flowing to the burner and into the collector box. The gas orifice or the venturi tube may be blocked. To clean, follow “Flashback” instructions.

B. If a weak spark arcs down around the ceramic insulator, the insulator should be cleaned. The insulator has a coating of grease or it is wet. Use an old tooth brush to break up the conductive electric path.

2. If there is no spark in the collector box.

A. Check the wire connections at the ignitor and electrode under the grill. Lubricating (use WD-40 or equivalent) the star wheel and tension spring of the ignitor will help connection contacts and improve operation.

B. Check spark. Pull the connector wire from the collector box (see “X” Fig. 46). Bring wire to bottom or top of control panel, hold about 1/8" away and operate the ignitor. Check for spark.

If there is **no spark** replace the Rotary Ignitor. If there is **a spark** the Rotary Ignitor is OK, but the Collector Box/Electrode assembly should be replaced (the ceramic insulator could be cracked).

C. Check Knob, confirm quality of the electrical ground at the Rotary Ignitor. Remove the knob, loosen and retighten the mounting screws.

Electrode Replacement or Adjustment

The electrode inside the collector box is pre-set for optimum spark.

The tip is 1/8" from inside surface of the collector box. To replace, remove the collector box by loosening the large nut from the bottom of the grill. Check the gap of the new part before installing. Loosening and tighten the two jam nuts will move the electrode tip, set at 1/8".

Flare-Ups

Expect and encourage a moderate amount of flare-up to enhance flavor. To control excessive flare-ups - trim excess fat before cooking, lower the heat setting, move meat to other side of grill if possible, cook with lid down.

For immediate control of flare-ups, throw a small amount of baking soda directly on the briquettes and lower heat setting. Do not douse flare-ups with water, this only worsens the flame.

Maintenance & Tube Bending

General Maintenance

Sear Magic Grid System Care

For best results, preheat the grill for 10 minutes.

1. Use a brass bristled brush to clean top rungs.
2. Use the supplied "Forked Grid Tool" to clean the valley areas between the main rungs. Simply run the tool back and forth with enough pressure to remove the debris. For heavy build-ups you can use a plastic scouring pads. **Do not use abrasives like steel wool pads or caustic cleaners such as oven cleaners. They will damage the grid surface and void your warranty.**
3. If a grid gets a slight bow, lay it on a flat surface and apply pressure to the ached area. This will flatten the grid to its original configuration.

Note: Over time the grids may change color slightly. This is normal and will not effect the grids performance or durability.

Stainless Steel Cleaning (TJK, Optimum Console)

Before Cleaning, determine which way the "grain" of the metal runs and always clean with the grain. NEVER USE STEEL WOOL PADS TO CLEAN STAINLESS STEEL.

1. Routine cleaning is done with a warm soapy water applied with a sponge or soft cloth. Always rinse with clean hot water and wipe dry with a soft cloth. Glass cleaners like Windex also works well.
2. Stubborn stains can be removed with a mild non-scratching abrasive household powder. Add a small amount of vinegar to the scouring powder to increase its potency.
3. Commercial stainless steel cleaners and polishers also work well, such as MHP's Stainless Steel Cleaner (Part #SSC).

Note: Over time the stainless steel will turn a mild gold patina from the grill's heat. This is normal.

FLEXIBLE STAINLESS STEEL GAS TUBE BENDING

For 2' & 4" Posts With Access Doors.

Fig. 49

Troubleshooting

Problem	Cause	Check
Yellow or orange flame and the smell of gas.	<ol style="list-style-type: none"> 1. Blockage in the venturi tube or orifice. 2. Orifice not seated properly in the venturi Tube. 3. Bent or kinked hose. 	<ol style="list-style-type: none"> 1. Clean venturi (See section "Annual Maintenance".) 2. Orifice must fit into venturi tube at least ¼" to ½" 3. Check gas supply line. Also, check all connections.
Burner does not light or flame is low in HIGH position.	<ol style="list-style-type: none"> 1. Could be a kink in the gas supply line. 2. LP tank could be low or empty. 3. LP regulator excess flow feature has been activated. 	<ol style="list-style-type: none"> 1. Straighten 2. Refill LP cylinder 3. Turn grill control knobs off, close LP tank valve and reopen valve slowly. Wait 5-seconds before turning on grill valves
Erratic flame pattern from burner or flame is low when burner control knob set at HIGH or flames do not run the whole length of burner.	Dirty burner	Clean burner holes with a small pin. Be careful not to enlarge holes
Constant flare-ups	<ol style="list-style-type: none"> 1. Grill too cold before start of cooking. 2. Cooking grate or briquettes may be heavily coated with burned-on grease. 3. Fatty foods. 4. Heat setting too high. 5. Briquettes laid out improperly allowing grease to hit flame. 	<ol style="list-style-type: none"> 1. You should always pre-heat grill for 5 to 10 minutes before cooking. 2. Clean cooking grate. Clean and turn over briquettes. 3. Trim excessive fat from fatty meats. 4. Lower heat setting. 5. Layout briquettes according to instructions on page 18.
Briquettes have turned black.	Dripping grease has Burned-onto briquettes.	Turn briquettes over. Over time black side of briquettes will self clean.
Food sticks to cooking grid.	<ol style="list-style-type: none"> 1. Cooking grid is probably too hot. 2. Food being turned before sear lines are produced. 	<ol style="list-style-type: none"> 1. Lower heat setting. Grids, especially SearMagic transfer heat quickly. You'll need to experiment with heat setting to get the best results. Or use a non-stick cooking spray. 2. Time food to turn over only once.
Flame blows out.	During periods of high wind and sometimes while cooking on a low setting, flame may be extinguished.	<ol style="list-style-type: none"> 1. On cart, simply turn away from wind. 2. Increase the heat setting.
Oxidation Graying of grill head.	Due to extreme cooking temperatures and severe weather conditions the grill body may bleed through the paint and cause white spotting (Oxidation).	Use a wire brush, sandpaper and wash with mild soap to remove flaking paint and grease. Repaint with high quality heat resistant paint similar to MHP's BF-1 Paint.
Grill does not get hot.	<ol style="list-style-type: none"> 1. See low flame above. 2. On natural gas, inadequate pressure at grill. 3. Incorrect orifice. 	<ol style="list-style-type: none"> 1. See low flame above. 2. Check pressure. Should be at or near 7" water column. 3. Check orifice size.

CAUTION: If problems can not be corrected using these methods, contact your local MHP dealer for assistance.

Parts Information

Parts are divided below into lists associated with the three different grill configurations . When ordering a part please provide the grill Identification, part number, quantity and product description. To order contact your local MHP dealer or MHP's customer service: phone: 1-888-647-4745, fax: 1-800-637-2918, or E-mail: mhp@voyager.net for the dealer nearest you.
